

1.2.2 Ensure GPG keys are configured (Not Scored)

Profile Applicability

Level 1 - Server
Level 1 - Workstation

Description

Most packages managers implement GPG key signing to verify package integrity during installation.

Rationale

It is important to ensure that updates are obtained from a valid source to protect against spoofing that could lead to the inadvertent installation of malware on the system.

Audit

Run the following command and verify GPG keys are configured correctly:

```
# rpm -q gpg-pubkey --qf '%{name}-%{version}-%{release} --> %{summary}\n'
```

Remediation

Update your package manager GPG keys in accordance with site policy.
